

## EMERGENCY INSTRUCTIONS

ON HEARING THE SIREN YOU ARE TO FOLLOW THESE INSTRUCTIONS:

The Alarm siren is an alternating high-low sound that will sound for at least one minute.

Seek shelter by entering the closest secure building; this will screen you from any external danger, such as high temperatures resulting from explosion or fire. Staying indoors will reduce traffic congestion and will keep streets clear for rescue operations to reach the place of incident.

Close doors, windows and louvers, and turn off ventilation or block other vents to protect yourself from entry of flying objects resulting from explosions and fumes.

Stay in a room farthest away from the accident preferably with an exit to the outside. Do not stay behind doors and windows leading to outside.

Avoid unnecessary use of telephone and mobile. Telephone and mobile telephone lines must not be overloaded so that people in real danger can contact the rescue services. Use the telephone ONLY if you require assistance.

Do not smoke. Turn off any flames. Flammable gas may be in the air.

Listen to the media. More details and instructions will be given over the media. (PBS radio 93.7 MHZ FM, or PBS TV)

Wait for the 'ALL CLEAR' signal that indicates that the danger is over.

The 'all clear' siren is a continuous tone sounding for at least 1 minute. The authorities will also give advice on PBS Radio & TV.
